

S60

WE'RE VOLVO. WE PUT PEOPLE FIRST.

We're Swedish. Scandinavian designers always start with the person who's going to use an object and ask, "What can we do to make this person's life better, easier or more comfortable?" We've always used this philosophy when we design our cars. So, while other car manufacturers might start with technology and try to squeeze people in around it, we begin by designing our cars around you. We ask what you need, and then use our technical skills to make your life easier, better, safer and more beautiful. Form follows function, and when you design a car inside and out with people in mind, it looks naturally beautiful. We think that looking at and interacting with our cars should make you feel great, every day.

Designing cars around people has led to many innovations over our 86-year history. The three-point safety belt in your current car? That was our invention from 1959. We've solved a few environmental issues, too – in 1976, we developed the Lambda Sond – a sensor that monitors exhaust gas, reducing emissions and boosting performance as well as economy. It's still part of every petrol-engined car in the world.

Innovation is at the core of Volvo. Perhaps it's because of where we come from.

IN SWEDEN, GREAT DESIGN IS A
WAY OF LIFE, NOT A LUXURY.

For such a small country, we've produced more than our share of creative talent. That's because we know that to be truly creative, you've got to believe in yourself and do things the way you know they should be done, regardless of what others are doing.

Take our seats. In the early 1960s, we consulted with a team of orthopaedic surgeons at Chalmers University of Technology here in Gothenburg. They wondered why a group of car designers wanted to see them. Nobody had thought to ask an orthopaedic surgeon's advice when designing a car seat before. But the ergonomic seat designs we developed as a result have made our cars world-famous for their outstanding long-distance comfort.

Like all Scandinavian craftsmen, we use only the best materials for the job, like the ultra-strong boron steel in our safety cages. We use natural, authentic materials inside our cars – not because they're fashionable this season, but because they make you feel good when you touch them and they're better for your health.

Creating a beautiful experience for you is natural for us. Because in Sweden, great design is a way of life, not a luxury.

OUR NEW VOLVO S60. FOR PEOPLE WHO LIKE TO TAKE THE LONG WAY HOME.

For the kind of driver who chooses the back roads when driving back from work at the end of the day just to get a smile on their face, the S60 was designed just for them.

For 2013, the car's handling, design and controls have been boosted with a comprehensive series of updates. The exterior boasts of a confident, tougher face and its road hugging stance while still retaining the clean, contemporary Scandinavian design, that made the S60 such a success right from its launch.

WHEN YOU ACCELERATE
OUT OF A CORNER...
IT'S LIKE IT CAN READ YOUR MIND.

We've focused on the new S60's natural driving dynamics so that its actions immediately correspond to your desires. When you accelerate out of a tight corner, for example, your S60 will follow the path you choose with almost telepathic accuracy. Drivers will love Corner Traction Control, a torque vectoring system that helps you avoid understeer by applying just the right amount of power and brake force to the inner and the outer wheels as you accelerate out of a corner. You'll find this particularly handy if you're merging into fast moving traffic from a side road.

FORM FOLLOWS FUNCTION: YES, IT LOOKS AS GOOD AS IT PERFORMS.

The all new S60 bears a confident and bold look. Inspired from the ruggedness of the wild, it has more road presence and displays a striking face with more focused and determined looking headlamps. The all new Volvo S60 exudes unmatched charm. There is more emphasis on the horizontal lines at the front with a wider grille, horizontal chrome bars and daylight running lights are positioned low to the ground to give the car a striking, road hugging presence. The character defining lines on the bonnet paints a solid look in the front while the dual integrated exhausts at the back of the car carries a racier and an exciting persona.

Staying true to Scandinavian origins, every last detail is made to maintain the elegant yet clean surface. The S60 offers an extended wheel choice with a variety of designs that increases the visual appeal. The radar cover is also painted a glossy black so it practically disappears. There is also a bigger Iron Mark- Volvo's iconic badge – which again enhances the car's self-confident look. That is to say that even when you are not driving, the S60 will still bring a smile to your face with just its confident and bolder looks.

The S60 D5 Summum comes with beautifully crafted integrated tailpipes. They remain perfectly in place, even though the pipe system expands by 25 mm as the engine reaches its operating temperature. This is a true Scandinavian precision engineering.

OUR NEW SPORT SEATS ARE JUST AS GRIPPING AS THE HANDLING.

Making each drive every bit exciting is the all new gearshift paddles. By offering faster gear changes and dynamic handling, the gearshift paddles allows you to keep your hands on the steering wheel and ensures that you are always 100 percent in control of your car. The S60 scores high on luxury too. The new Sport seats bear an athletic look and hugs and support you from thighs to your shoulders. Staying true to Volvo's renowned ergonomic design, the seats let you drive for hours without getting tired.

Our all-new Ambient Light illuminates any features you might need to find at night. A crisp white glow ensures you'll never have to fumble in the dark for cupholders or seat controls, or root around blindly in the luggage areas.

WHICH S60 ARE YOU?

ELEGANCE MODE

ECO MODE

The Adaptive Digital Display console which is carried over from the Volvo V40 Cross Country, is a true expression of our philosophy. It uses an active TFT (Thin Film Transistor) crystal display to bring the driver personalized information. The TFT console sits beautifully in the centre that makes the whole experience intuitive and functioning a breeze. With changing dynamics of driving, the interactive dashboard changes colour matching the mode and assists you in maintaining optimization and not to mention the mood.

PERFORMANCE MODE

OH YES. DID WE MENTION SAFETY?

INTELLISAFE

In 1927 our founders, Assar Gabrielsson and Gustaf Larson, decided to make really strong cars that could cope with our rough country roads. But strength alone wasn't enough. They also had a vision: "Cars are driven by people," they said, "so the guiding principle behind everything we make at Volvo is – and must remain – safety." Now our goal is that, by 2020, nobody shall be seriously injured or killed in a new Volvo. We think our founders would have approved.

In order to help us achieve this goal, and in keeping with our philosophy of making your life easier, your S60 has a whole suite of intuitive safety technologies inside it. They're there to support your daily driving, protecting you in the event of an accident and often preventing collisions in the first place. We call this IntelliSafe.

We know S60 owners love driving, but in a world of busier and busier roads, you are constantly exposed to other people's mistakes. You've always expected Volvos to be safe in the event of a crash, but IntelliSafe goes beyond that. It's our

complete approach to safety and includes some really smart technologies such as City Safety & Intelligent Driver Information System.

And because you love driving, it's good to know that your S60 doesn't just protect you – it actively supports you, too. Our Dynamic Stability and Traction Control (DSTC) is another IntelliSafe technology. If there's a risk of your S60 losing stability, DSTC applies just the right amount of brake force and reduces engine power as needed in order to prevent any skidding. You'll probably never notice a thing.

In town, City Safety is designed to prevent you from colliding with the car in front if it stops suddenly. This advanced IntelliSafe system works at speeds of up to 50 km/h and senses if you're about to collide with another car, then, if necessary, applies the brakes.
